

Beaman Woodworks Development Invoice

Work Window: March 22–26, 2026

Prepared: Wednesday, April 1, 2026

Table of Contents

Table of Contents	1
Basis	1
Hourly Rate Equivalent at \$400 NTE	1
Effective Realized Rate	1
Effective Discount	1
Itemized Billing Sheet	2
Explanations	4
1. Planning, scope, and site structure	4
2. Design direction and concept work	4
3. Project setup and technical foundation	4
4. Homepage, branding, navigation, and shared layout	4
5. Portfolio, journal, and core content pages	4
6. Shop and commission inquiry workflows	4
7. Customer request tracking and status pages	4
8. Private studio/admin area	4
9. Backend logic, data storage, and secure access	4
10. Deployment setup, Synology hosting, testing, documentation, and cleanup	4

Basis

Valuation Level	Hours	Hourly Rate	Total
Floor	34.0	\$35.00	\$1,190.00
Midpoint	38.0	\$42.50	\$1,615.00
Ceiling	42.0	\$50.00	\$2,100.00

Hourly Rate Equivalent at \$400 NTE

Effective Realized Rate

\$400 / 38 hours = **\$10.53/hour**

Effective Discount

70%–79%

Itemized Billing Sheet

#	Work category	Description	Low hrs	Mid hrs	High hrs	Low value (\$35)	Mid value (\$42.5)	High value (\$50)
1	Planning, scope, and site structure	Figuring out what the website needed to do, what pages it needed, how a customer would move through it, and how the woodworking business should be presented online	2.0	2.5	3.0	\$70.00	\$106.25	\$150.00
2	Design direction and concept work	Visual direction, layout ideas, design references, prototype-style exploration, and deciding how the brand should look and feel online	3.0	3.5	4.0	\$105.00	\$148.75	\$200.00
3	Project setup and technical foundation	Setting up the site project, framework, folders, dependencies, fonts, and basic technical structure so the rest of the website could be built properly	2.0	2.5	3.0	\$70.00	\$106.25	\$150.00
4	Homepage, branding, navigation, and shared layout	Building the homepage, header, footer, sitewide style system, navigation, reusable sections, and the overall branded look of the site	4.0	4.5	5.0	\$140.00	\$191.25	\$250.00
5	Portfolio, journal, and core content pages	Building the main pages that show woodworking pieces, project details, and written content so visitors can understand the work and the studio	4.0	4.5	5.0	\$140.00	\$191.25	\$250.00
6	Shop and commission inquiry workflows	Building pages and forms so a customer can inquire about available work or start a custom commission request	4.0	4.5	5.0	\$140.00	\$191.25	\$250.00

#	Work category	Description	Low hrs	Mid hrs	High hrs	Low value (\$35)	Mid value (\$42.5)	High value (\$50)
7	Customer request tracking and status pages	Creating pages where a customer can look up a request, check status, and send follow-up information about the project	3.0	3.5	4.0	\$105.00	\$148.75	\$200.00
8	Private studio/admin area	Building the private password-protected part of the site used to review inquiries, update project status, and manage requests behind the scenes	4.0	4.5	5.0	\$140.00	\$191.25	\$250.00
9	Backend logic, data storage, and secure access	Wiring forms and pages so information could be saved, organizing request data, handling sign-in/session logic, and supporting the site's working features behind the scenes	5.0	5.0	5.0	\$175.00	\$212.50	\$250.00
10	Deployment setup, Synology hosting, testing, documentation, and cleanup	Preparing Docker/Synology deployment files, testing setup, writing instructions/notes, cleaning up project structure, and documenting next-step ideas	3.0	3.0	3.0	\$105.00	\$127.50	\$150.00
	Total		34.0	38.0	42.0	\$1,190.00	\$1,615.00	\$2,100.00

Explanations

1. Planning, scope, and site structure

This covers the work of deciding what the website needed to contain and how it should be organized so it would make sense to customers. That includes deciding on the main sections, what the customer journey should be, and how the woodworking business should be presented clearly.

2. Design direction and concept work

This covers the visual thinking behind the site: how it should look, what feeling it should convey, and how to translate the woodworking style into a web design that feels professional and on-brand.

3. Project setup and technical foundation

Before a site can be built well, the underlying project has to be set up correctly. This includes the framework, folders, fonts, packages, and base configuration that make the rest of the work possible.

4. Homepage, branding, navigation, and shared layout

This is the visible shell of the site: the homepage, navigation, shared branding, layout, and reusable visual elements that make the site look polished and consistent.

5. Portfolio, journal, and core content pages

This covers the pages that let customers browse pieces, read about the work, and understand the studio's style and offerings.

6. Shop and commission inquiry workflows

This is the part of the site that turns visitors into actual leads by letting them ask about an available piece or request custom work.

7. Customer request tracking and status pages

This is a higher-value feature than a simple contact page. It lets customers return to the site to check their request and stay involved in the process.

8. Private studio/admin area

This is the private working side of the site used to manage customer requests and update project progress. It adds real operational value beyond just marketing.

9. Backend logic, data storage, and secure access

This is the "behind the scenes" work that makes the forms and tools actually function, save information, and stay organized. Customers do not always see this work directly, but it is essential.

10. Deployment setup, Synology hosting, testing, documentation, and cleanup

This covers getting the site into a form that can be hosted on the Synology setup, plus the supporting documentation and cleanup needed to make the project usable and maintainable.
